Education

Grambling State University

Bachelor of Science in Computer Science

August 2024 – May 2028

Grambling, Louisiana

Relevant Coursework

- Data Structures & Algorithms
- System Design
- Computer Programming
- Statistics & Applications
- Artificial Intelligence
- Operating Systems
- Systems Programming
- Computer Architecture

Experience

Gusto

Summer 2026

Software Engineering Intern

Hybrid

- Owned end-to-end delivery of a full-stack feature for a new revenue-generating insurance product, shipping it incrementally across multiple production milestones.
- Built 10+ React/TypeScript components spanning a five-screen flow, plus the supporting Ruby on Rails backend — the transfer API endpoint, service layer, and downstream CRM integration.
- Authored 50+ automated tests across frontend and backend suites, preventing regressions through the team's CI pipeline.
- Merged 20+ production pull requests, incorporating feedback from engineers through iterative code reviews.

Google x Basta Code2Career (G-SWEP)

Fall 2025

Selected Participant

Remote

- Selected for a Google-sponsored software engineering program providing mentorship, technical training, and career development.
- Participated in weekly one-on-one mentorship with Google engineers, focused on data structures, algorithms, and interview preparation.
- Enhanced technical problem-solving through CodeSignal assessments, coding challenges, and collaborative workshops.

Code2040 Fellows Program

2025 Cohort

Selected Fellow

Remote

- Selected for a 10-month national program supporting Black and Latinx computer science students through racial equity advocacy, mentorship, and professional development.
- Engaged in cohort-based learning experiences focused on leadership, racial justice, and navigating the tech industry.
- Built community with peers and mentors committed to transforming equity and inclusion within the technology sector.

Projects

DevMesh | *React, Vite, Tailwind CSS, Framer Motion, shadcn/ui, Gemini API*

May 2025

- Built a responsive, animated frontend for an AI-powered developer matchmaking platform that leverages the Gemini API to suggest ideal collaborators based on skill sets, tech stacks, and project compatibility.
- Implemented dynamic, modular UI components with Tailwind CSS and shadcn/ui, featuring smooth transitions and rich interactions using Framer Motion.
- Engineered core flows including intelligent match suggestions, project creation, and real-time chat room access, all optimized for mobile and desktop.

CodeSplain | *JavaScript, HTML, CSS, CodeMirror, Google Gemini API*

April 2025

- Designed and implemented a dynamic code editor using CodeMirror with live syntax highlighting, theme toggling (dark/light), and “focus chips” (algorithm, performance, security, best practices) for contextual explanations.
- Integrated Google Gemini API to generate JSON-formatted code explanations at four adjustable education levels (Beginner → Expert), enabling scaffolded, on-demand learning for programmers.

Activities

GSU International Student Union

Fall 2024 – Present

Member

Grambling State University
