Education

Grambling State University

August 2024 – May 2028

Bachelor of Science in Computer Science, GPA: 3.91/4.00

Grambling, Louisiana

- **Academic Achievement Scholarship**
- **Relevant Coursework:** Data Structures & Algorithms, Operating Systems, Systems Programming, Computer Architecture, Artificial Intelligence, Statistics & Applications

Technical Skills

Languages: Python, Java, C++, C, JavaScript, TypeScript, Ruby, SQL

Frameworks/Libraries: React, Express, Ruby on Rails, Flask, Node.js, Next.js, Django

Databases/Infrastructure: PostgreSQL, Redis, MSSQL Server, Kafka, Docker, AWS, Sidekiq

Developer Tools: Git, GitHub, Datadog, Vitest, Playwright, GTest, Valgrind, Google Benchmark

Experience

Gusto

May 2026 – August 2026

Software Engineering Intern

Hybrid

- Led end-to-end delivery of a five-screen full-stack insurance workflow through 20+ production pull requests across customer-facing frontend and backend systems.
- Built 10+ React/TypeScript components and supporting Ruby on Rails APIs, implementing service-layer logic and downstream integrations for the production workflow.
- Authored 50+ automated frontend and backend tests integrated with CI, strengthening regression coverage and reliability across the end-to-end workflow.

Google x Basta Code2Career (G-SWEP)

Selected Participant

Remote

- Selected among approximately 250 participants from 2,100+ applicants for a 10-week Google-sponsored software engineering mentorship and interview preparation program.
- Achieved 500+/600 on CodeSignal assessments through focused data structures and algorithms practice, coding challenges, and technical problem-solving exercises.
- Completed 10 mock interviews and weekly 1:1 sessions with Google engineer, developing structured problem-solving approaches for technical interviews.

Projects

Trail | React, TypeScript, Express, PostgreSQL, Kysely, Neon Auth, Vitest, Playwright

- Built a full-stack project management platform supporting 6+ core ticket operations, including creation, editing, prioritization, status transitions, archival, and blocked-work tracking.
- Architected Express APIs and service-layer logic with PostgreSQL and Kysely, modeling relational project, ticket, and workspace data across the application.
- Built authentication and automatic workspace provisioning flows backed by relational persistence, with API and end-to-end coverage using Vitest and Playwright.

Darwin | React, Python, Flask, Gemini API, Axios

- Built an adaptive learning platform that generates personalized explanations from learner profiles, questions, and interaction context using the Gemini API.
- Developed Flask API endpoints connecting a React frontend to AI-powered services, enabling personalized responses across two interaction modes: text and voice.
- Implemented error handling and fallback request logic for failed Gemini API calls, preventing failed requests from breaking the learning flow and preserving a reliable user experience.

Leadership & Activities

GSU International Student Union
